

Front Yard Coop

The country is going crazy for chickens. Everywhere you look people are trying to keep a chicken or two in the yard for the pleasure of gathering fresh eggs. Agribusiness and factory farming are leading more and more people to the safety of slow food and local producers. Families are enjoying raising their own food and finding new meaning in simple pleasures. The makers of the **Front Yard Coop** are proud to announce the first chicken coop that merges green technology, sustainable agriculture, natural food, and good old-fashioned Yankee ingenuity. The Front Yard Coop brings instant poultry satisfaction to any new chicken owner. Run on solar power, it offers both an electrically charged fence and the option of simple robotics that slowly propel it back and forth across your yard.

Born of many years experience raising chickens at home, the inventors of the Front Yard Coop have incorporated solutions to the problems they encountered over the years into the designs they offer for sale. They also have experienced tremendous joy and satisfaction in raising a home flock, and it has changed their lives. The result is a beautifully designed, worry-free home for your flock that protects them from predators and provides for them if you are away. It can change your life. Sized for a flock of up to six birds, the FYC is made of a welded aluminum frame covered in painted beadboard. It is weatherproof, sturdy, and can be painted in the Benjamin Moore color of your choice to match your home. It can store several days' food and water and dispense them automatically. It is currently available in both a motorized and a non-motorized model. The motorized model stores power from a solar cell on a marine deep-charge battery and inches along your yard at a safe and subtle 12 feet per hour. This distributes the flock's impact on your lawn and spreads its manure. The non-motorized version can be easily moved by hand with its detachable dolly. Both versions have an electrically charged fence that can be activated to repel invaders with a persuasive shock that keeps them from harming your chickens. It too is run on stored solar power and has no carbon footprint.

Everybody wins with the Front Yard Coop -- the children, the adults, the chickens. Start enjoying the fun and reaping the benefits of raising chickens at home. Gather fresh eggs when you need them. Eliminate the need for chemical fertilizers in your yard. Your children can learn the joy and responsibility of caring for animals. They will understand where their food really comes from and that learning and home can be fun. You don't need to go out to experience good food, the wonders of nature, or a good laugh. The simple pleasures are always the best.
